

Quality & Compliance Services

How time-consuming is your monitoring system?

Environment Monitoring is an essential but increasingly complex part of regulatory compliance, quality and laboratory safety.

Variations must be detected as quickly as possible. But keeping an eye on all the parameters (temperature, humidity, CO₂...) throughout the lab (refrigerator, cooler, incubator, storage room, autoclave...) can be time-consuming and literally have you running around the lab.

Monitor the entire lab from a single screen

Start with an installation audit with one of our specialists. Together, we will develop a comprehensive environmental monitoring program adapted to your lab's specific needs.

Your tailor-made solution will integrate wireless probes and relays across your lab, streaming information towards a single computer interface.

This user-friendly system enables you to easily and automatically measure, monitor, record and alert on physical values for:

- all laboratory elements and areas
- sample and reagent transport conditions

Environment Monitoring

Complete traceability and continuous improvement

Our system provides total traceability so you can implement corrective actions before sample integrity or product performances become impacted by non-conforming storage or shipping conditions.

To optimize your result quality, we also help you assess the maintenance of these processes over time.

Seamless service from start to finish

- From choice of system through installation, qualification and validation

An integrated, wireless monitoring solution

- Probes
- Recorders
- Software

Expert know-how in an increasingly complex field

- Installation audit to define your needs
- Mapping of the area to be monitored
- Installation qualification
- Operational qualification
- Calibration service
- Metrology
- Transport temperature monitoring from sampling to technical platforms

Compliance made easy

- EN ISO 15189 - clinical (section 5.2, Accommodation and Environmental Conditions)
- EN ISO 17025 - industry

Save your lab time

Automate your environmental monitoring system today!
